Education

Bachelor of Computer Science

2024 – Present

Specialization: Software Engineering

Cambodia Academy of Digital Technology (CADT)

GPA: Year 1 – 3.57 | Year 2 – 3.67

High School Diploma 2018 – 2024

Hun Sen Sereypheap High School

Sovannaphumi School 2014 – 2023

General English Program

Technical Skills

Languages
JavaScript, TypeScript, Python, SQL, Java (OOP)

Frameworks & Libraries
React.js, Vite, Tailwind CSS, Node.js, Express.js, Nest.js

Databases
PostgreSQL, MySQL, SQLite, Prisma

Networking
TCP/IP, IPv4/IPv6 Subnetting, Routing & Switching, Cisco IOS, Packet Tracer

Tools & Platforms
Git, GitHub Actions, Docker, Vercel, Render, Linux, Postman, Swagger, VS Code, Claude Code

Soft Skills

- Communication
- Teamwork & collaboration
- Problem solving
- Research & analysis
- Time management

Project Management

Scrum, Sprint Planning, Kanban

Languages

Khmer	*Native*
English	*Intermediate*
Mandarin	*Elementary*

Achievements

- Selected as **1 of 60** from **1,100+** applicants for Techpreneur Bootcamp 2.0 (2026)
- Year 1 academic rank: **33 of 351**
- Year 2 academic rank: **15 of 139**
- Completed NGEP Batch II (2025)

Certifications

DICHI Academy *2026*
Frontend Development with ReactJS
Database & Entity Relation Diagrams
Project Management & Git

Cisco Networking Academy *2025*
CCNA: Introduction to Networks
Python Essentials 1

Profile

Year 3 Computer Science student specializing in Software Engineering, with a strong foundation in algorithms, data structures, and OOP. Builds full-stack web applications with React, Node.js, and SQL databases, and is seeking an internship to apply these skills to real-world problems.

Experience

Undergraduate Researcher 2026

ML for Lightweight IoT Intrusion Detection | CADT, supervised by Dr. Cheab Sovuthy

- Conducted a group systematic literature review following PRISMA, screening 19,300 records down to 46 studies.
- Compared ML, ensemble, deep, hybrid, and federated learning approaches, and mapped key attack vectors (DDoS, Mirai, MitM, XSS/SQLi).

TechPreneur Bootcamp 2.0 – Full Stack Development Track 2026 – Present

DICHI Academy × ELIX

- Selected for a fully funded 7-month program; progressing through ideation, an MVP hackathon, and Demo Day.

NGEP – Batch III 2026 – Present

Team Member

- Working in a cross-department team on MPTC's Digital Media & Information Literacy (DMIL) framework over 5 weeks.

Volunteer – Trainer & Mentor Assistant 2026

- **NGEP Trainer:** taught a 5-week Algorithms & Data Structures course in C++ to junior students, preparing lessons and adapting the provided materials and exercises.
- **Innovation Challenge Mentor Assistant:** supported mentors and foundation-year teams building social-impact tech solutions.

Projects

MedFlow – Clinic Management Web Application 2026

React.js | TypeScript | Express.js | PostgreSQL

- Architected (team of 2) a full-stack clinic management system for Cambodian clinics, with JWT-authenticated role-based access control (Admin / Doctor / Staff) and RESTful APIs for staff, patient, appointment, billing, and dashboard modules.
- Optimized PostgreSQL queries with composite indexing and pagination, reducing appointment-listing and dashboard response times by 35%.
- Built a responsive React frontend with role-based UI rendering and a reusable component library.

Seksa – Scholarship Web Application 2026

React.js | TypeScript | Tailwind CSS | FastAPI | PostgreSQL

- Built a web platform that matches Cambodian students to scholarships they qualify for and explains which requirements they meet or miss.
- Developed reusable React + TypeScript components and connected them to a FastAPI backend for scholarship search, matching and profiles.
- Implemented application tracking with document checklists and automatic deadline reminders, so students can manage several applications in one place.

Zoo Management System – Java Desktop Application 2026

Java | Swing | MySQL | JDBC

- Designed an N-tier desktop system with a DAO data layer, applying OOP principles (inheritance, polymorphism, encapsulation) across staff, animal and habitat models.
- Implemented role-based access for Managers and Keepers through class inheritance, with automated feeding schedules derived from animal type and habitat.
- Persisted all data to MySQL via JDBC and added a custom exception layer for consistent error handling.
